AI opportunity mapping

A structured way to find out where AI actually belongs in your product — based on real user needs and data, not gut feel.

A ranked list of use cases, not a strategy deck

Definition

“Where does AI actually earn its place?”

AI opportunity mapping is a structured process to identify and prioritise where AI can add real value. It looks at user needs, existing data, and technical feasibility together, and ranks specific opportunities. The output is a short list of use cases worth building — in order.

What we weigh

User need
A real job the user is trying to get done — not a demo.

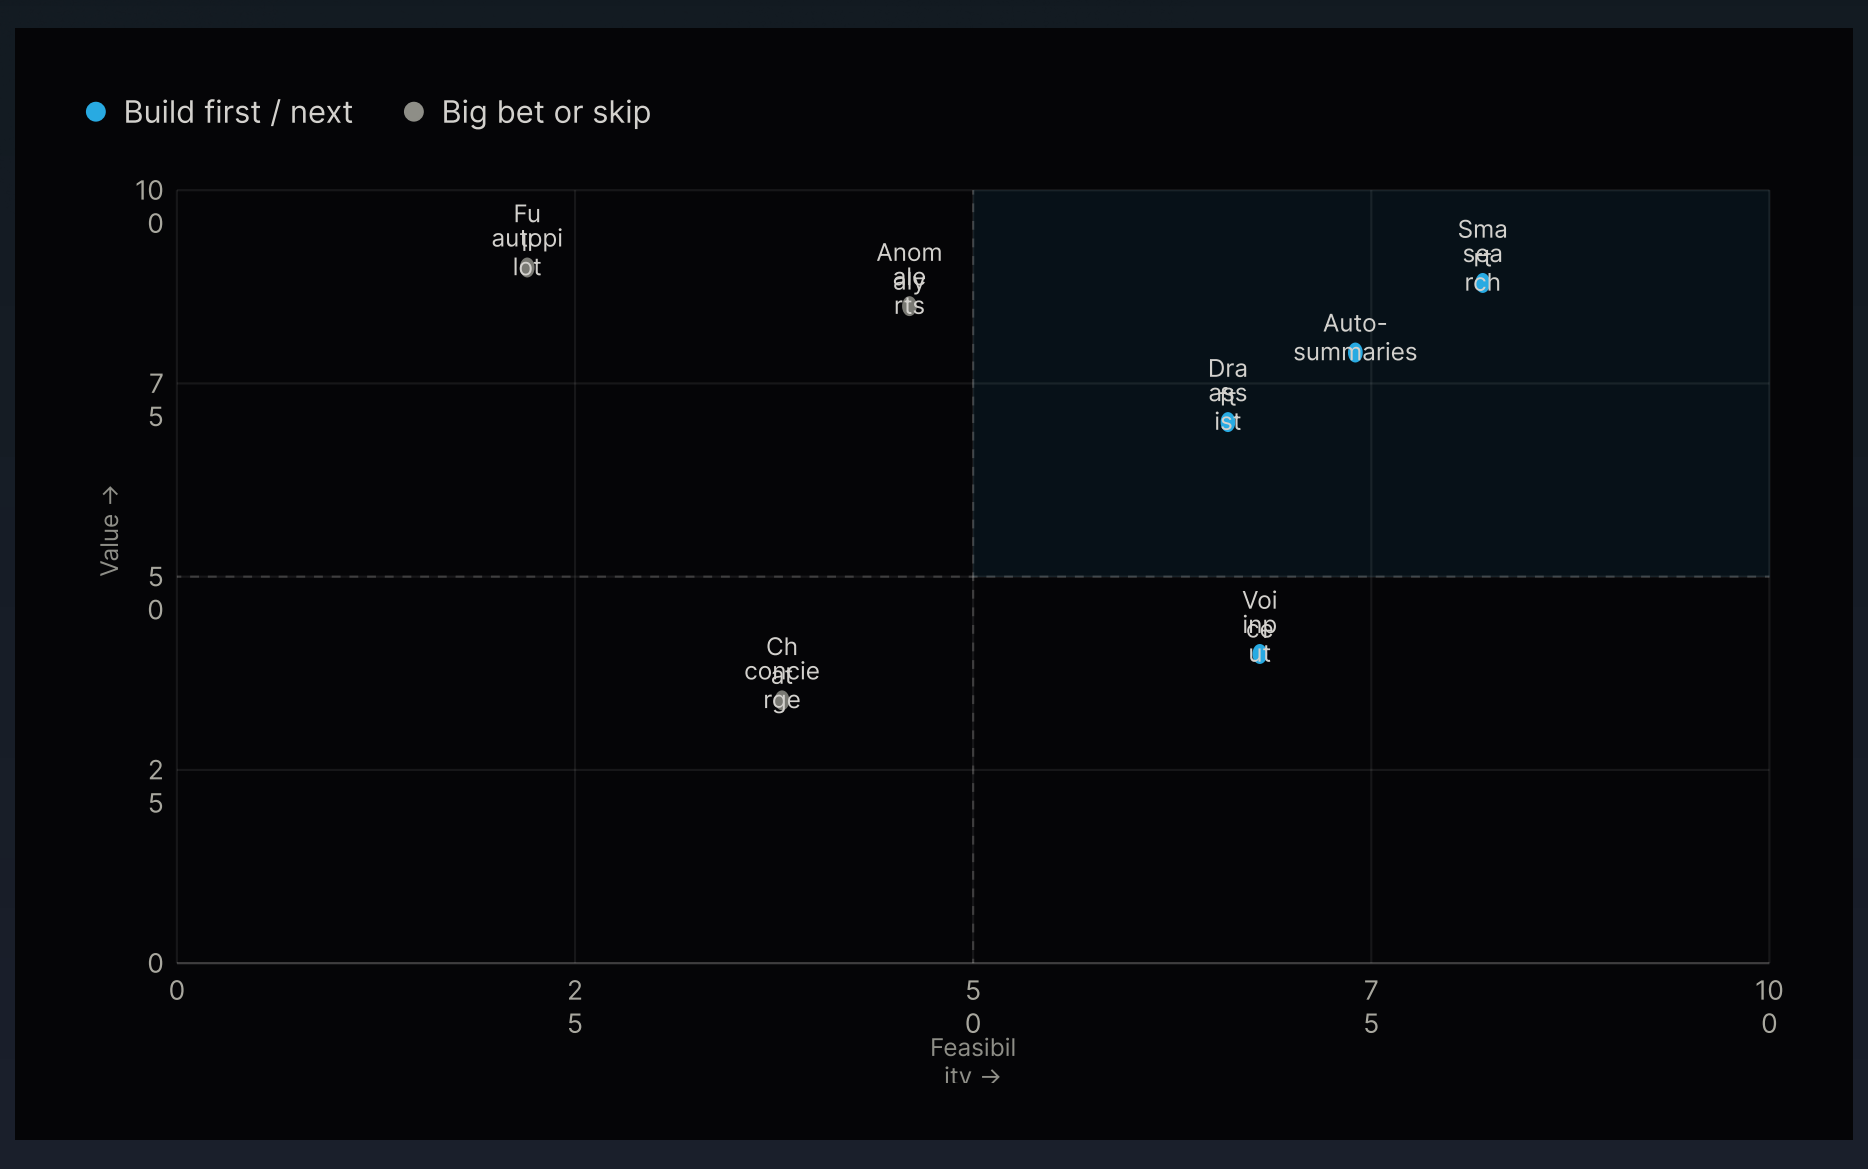
Existing data
Whether you have the data to make the model useful.

Feasibility
What’s easy, what’s deceptively hard, where the constraints are.

Value vs. effort
A score on each candidate, so the order is defensible.

Value against feasibility

Every candidate use case, scored and plotted. The top-right corner — high value, high feasibility — is where you start. Hover any point for its scores.



Where AI belongs, decided before anyone writes code

Avoids building the wrong thing
Grounds AI decisions in actual user needs and product data, not trend-chasing.

Feasibility included upfront
Flags what’s easy, what’s deceptively hard, and where the real constraints are — before anyone commits engineering time.

Clear prioritisation
Ranks opportunities by value and effort, so the team knows what to build first.

A decision, not a deck
Ends in a short, specific list your team can brief and start building from.

Six principles behind every session

The candidates change with every product. What keeps the ranking honest doesn't.

01
Start from needs, not tech

We begin with user needs and existing data — the technology comes after the problem.

02
Every perspective at the table

03
Score value and feasibility

Mapped in the wild

A few frames off the sheet — where AI earned its place, and where we said not yet.

Frequently asked questions

How is this different from general AI strategy consulting? +

What goes into the process? +

Do I need to already have an AI strategy in place? +

What do I walk away with? +

Not sure where AI actually *belongs in your product?*

Tell us about your product and your users. We'll map the candidates, score them on value and feasibility, and hand you a ranked list you can start building from.
