Quantitative and qualitative research

We help teams understand their users — through numbers and through conversations. One tells you what's happening. The other tells you why.

Start a Project

Two ways of understanding users

Most projects need both. One counts what is happening across a crowd; the other sits with a few people and asks why.

Quantitative

"How many, how often?"

Collects and analyses numerical data — survey responses, analytics events, usability metrics — to find patterns across a sample large enough to trust.

Qualitative

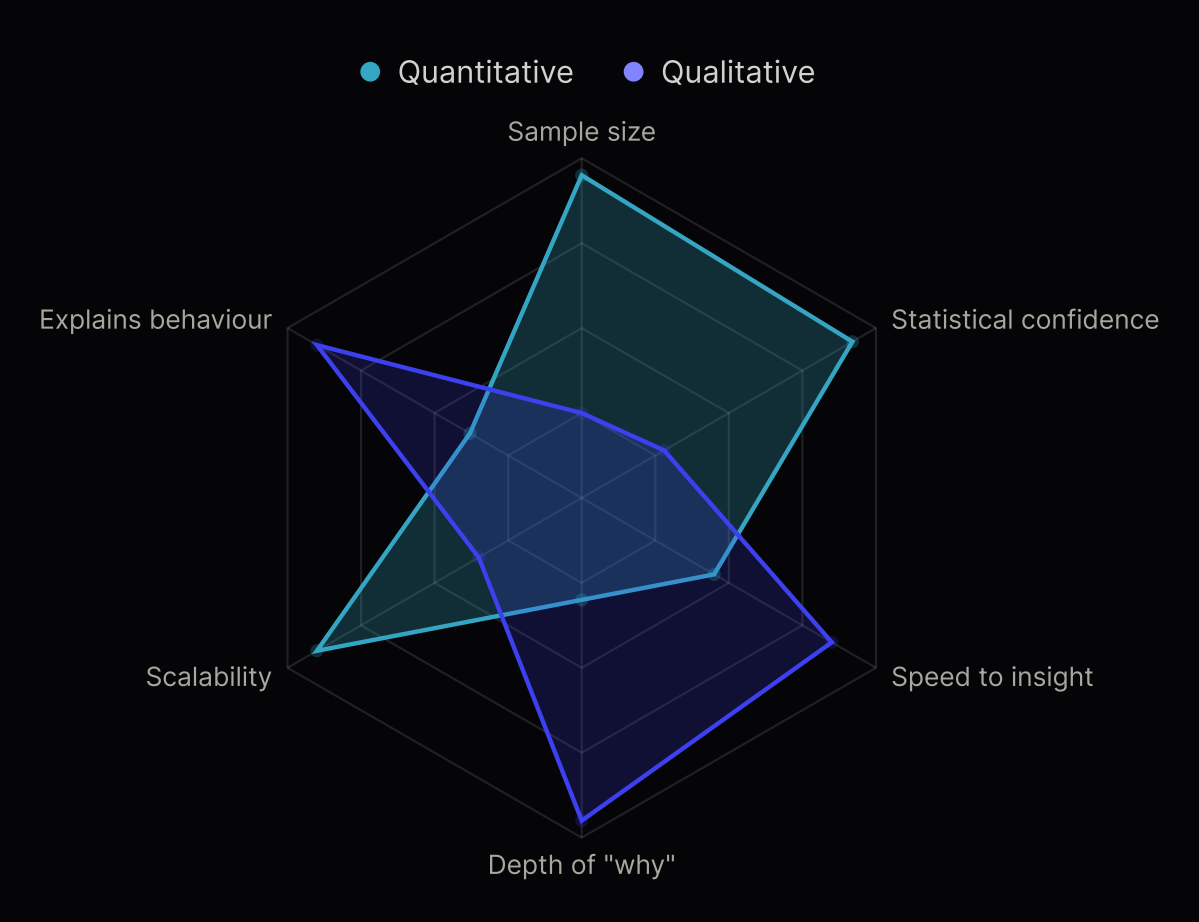
"Why?"

Talks to real users — through interviews, observation, and usability sessions — to understand the motivations and context behind their behaviour.

Quantitative vs. qualitative

Two different shapes of strength. Quant spreads wide and validates; qual goes deep and explains. Hover any axis to read the detail behind it.

	Quantitative	Qualitative
Sample size	Large, representative	Small, purposeful (5–12 users)
Statistical confidence	Validated patterns	Themes, not significance
Speed to insight	Needs a full sample	A focused read in ~2 weeks
Depth of "why"	Shows what & how often	Explains motivation & context
Scalability	Scales across a population	Deep but small-N
Explains behaviour	Measures behaviour	Interprets behaviour



Research pays for itself in decisions you don't have to reverse

Most projects need both. One counts what is happening across a crowd; the other sits with a few people and asks why.

Data-driven decisions
Replace assumptions with measured insights, backed by real user data — from numbers and from direct observation.

The full picture
Numbers show you where the problem is. Conversations show you why it's happening. Together, they point to a fix.

Risk reduction
Validate ideas before you build them, and understand user reasoning before you commit to a direction.

Confidence to act
Whether it's a stakeholder who wants numbers or a design decision that needs context, you have evidence either way.

Case studies

A few frames off the sheet — projects where the numbers and the conversations pointed the same way.
