Service design

We look at your service end to end — every touchpoint, every team behind it — and make it seamless, aligned, and easier to deliver.

The whole service, not one screen

Definition

“Seamless outside, efficient inside.”

Service design improves a service as a whole system — every touchpoint a customer experiences and every internal process behind it. Instead of fixing one step in isolation, it aligns people, processes, products, and partners around the customer.

What we align

People
The teams who deliver each part of the journey.

Processes
The internal steps customers never see but always feel.

Products
The screens, tools, and channels the service runs on.

Partners
The third parties woven into the experience.

One journey, two layers

A service blueprint maps what the customer experiences against the internal work that makes it happen — so the gaps between the two become obvious.

Discover	Onboard	Use	Support
Frontstage Customer finds the service and weighs whether it fits.	Frontstage They sign up, verify, and set the service up for their needs.	Frontstage They complete the core task the service exists to do.	Frontstage They hit a snag and reach out for help.
BACKSTAGE Marketing, content, and eligibility rules feed what they see.	BACKSTAGE Identity checks, provisioning, and account setup run behind the scenes.	BACKSTAGE Product, data, and operations keep each transaction moving.	BACKSTAGE Support, escalation paths, and knowledge bases resolve it.

Fix the system, not the symptom

Cheaper to fix early
Mapping the full customer journey surfaces problems while they’re still easy to fix.

Breaks down internal silos
Looking at the service holistically exposes where teams are working against each other, not together.

Consistent across touchpoints
Aligns quality and experience whether a customer interacts online, in person, or through support.

A real competitive edge
A service that’s genuinely easier to use and deliver is hard for competitors to copy quickly.

Six principles behind the work

01
Customer at the center

Every decision traces back to what the customer is actually trying to do.

02
The full journey

03
Map the inside too

Redesigned in the wild

A few frames off the sheet — services we mapped end to end and put back together.

Frequently asked questions

How is service design different from product design? +

What does the process actually involve? +

Who inside our organization needs to be involved? +

What do I get at the end? +

Is your service working the way *your customers experience it?*

Tell us where the journey feels rough — for customers or for the teams behind it. We'll map it end to end and show you where to align.
