UX and UI design

We design how a product works and how it looks — information architecture, interaction flows, and visual design that hold up under real use.

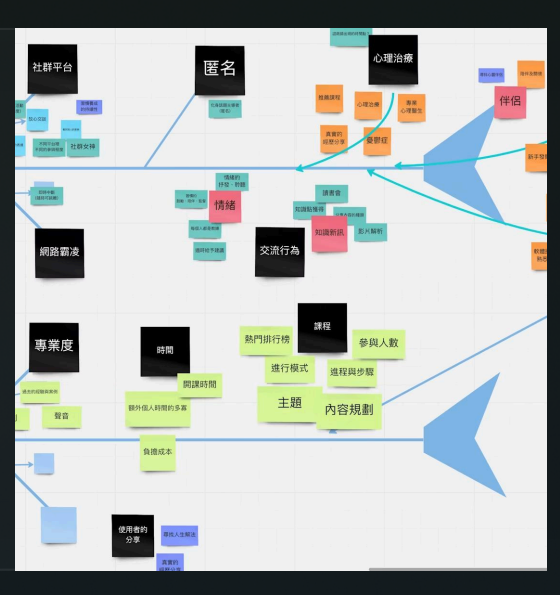
Two disciplines, one product

They're distinct skills — and a product needs both done well to actually work. One decides how it works; the other decides how it looks.

UX — how it works

“Can I get this done?”

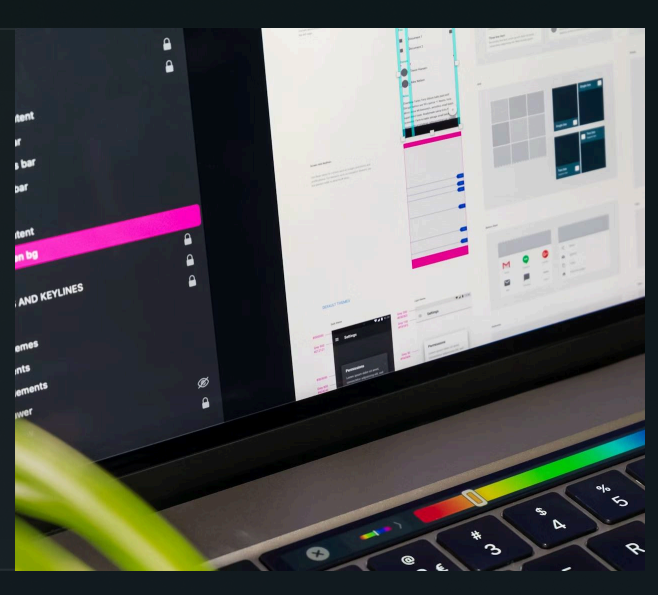
The structure, flow, and logic behind every screen — information architecture, user journeys, and interaction design — so people can complete tasks without friction.



UI — how it looks

“Does this feel considered?”

Talks to real users — through interviews, observation, and usability sessions — to understand the motivations and context behind their behaviour.



Structure first, surface second

Visual design sits on top of a validated structure — never the other way around. Here's the order the work actually happens in.

01

Information architecture

Map the structure and user journeys — what lives where, and how people move through it.

02

Wireframes

Lock down layout and flow in low fidelity, and validate it before any pixels are polished.

03

Visual design

Apply typography, color, and components on top of a structure that already works.

04

Component system

Package it into reusable patterns your engineers can build from directly.

Looks earn attention — structure earns trust

Usability first

A product that looks polished but confuses users still fails. UX comes before UI.

Consistency at scale

A defined visual system means every new screen looks and behaves like it belongs to the same product.

Fewer costly changes later

Getting structure and flow right early avoids expensive rework after development starts.

A product people want to use

Good UI doesn’t just look good — it builds trust and makes the product feel considered.

Six principles behind every session

01

Structure before visuals

Flow and hierarchy get settled before a single colour or typeface is chosen.

02

Design for the task

03

Consistent patterns

Mapped in the wild

A few frames off the sheet — products where structure and surface pulled in the same direction.

Frequently asked questions

What makes Peepal Design different from other UX agencies? +

How long does a typical UX research project take? +

Do you work with international clients? +

Can you do both research and design for the same project? +

What is LEGO® Serious Play and how can it help? +

What industries do you have experience in? +

Do you offer UX training for in-house teams? +

How do I get started with Peepal Design? +

Ready to design something *that actually works?*

Tell us what you're building and who it's for. We'll get the structure right first, then make it look like it means it.
