UX benchmarking

We help teams understand their users — through numbers and through conversations. One tells you what's happening. The other tells you why.

Two ways of understanding users

Definition

“Are we better than last release?”

UX benchmarking evaluates your experience with a consistent set of metrics, measured against a meaningful standard — a previous version, a competitor, or an industry baseline. The result is a single UX Index: one number you can track release over release.

What feeds the index

Task success rate
How many people complete the core task, unaided.

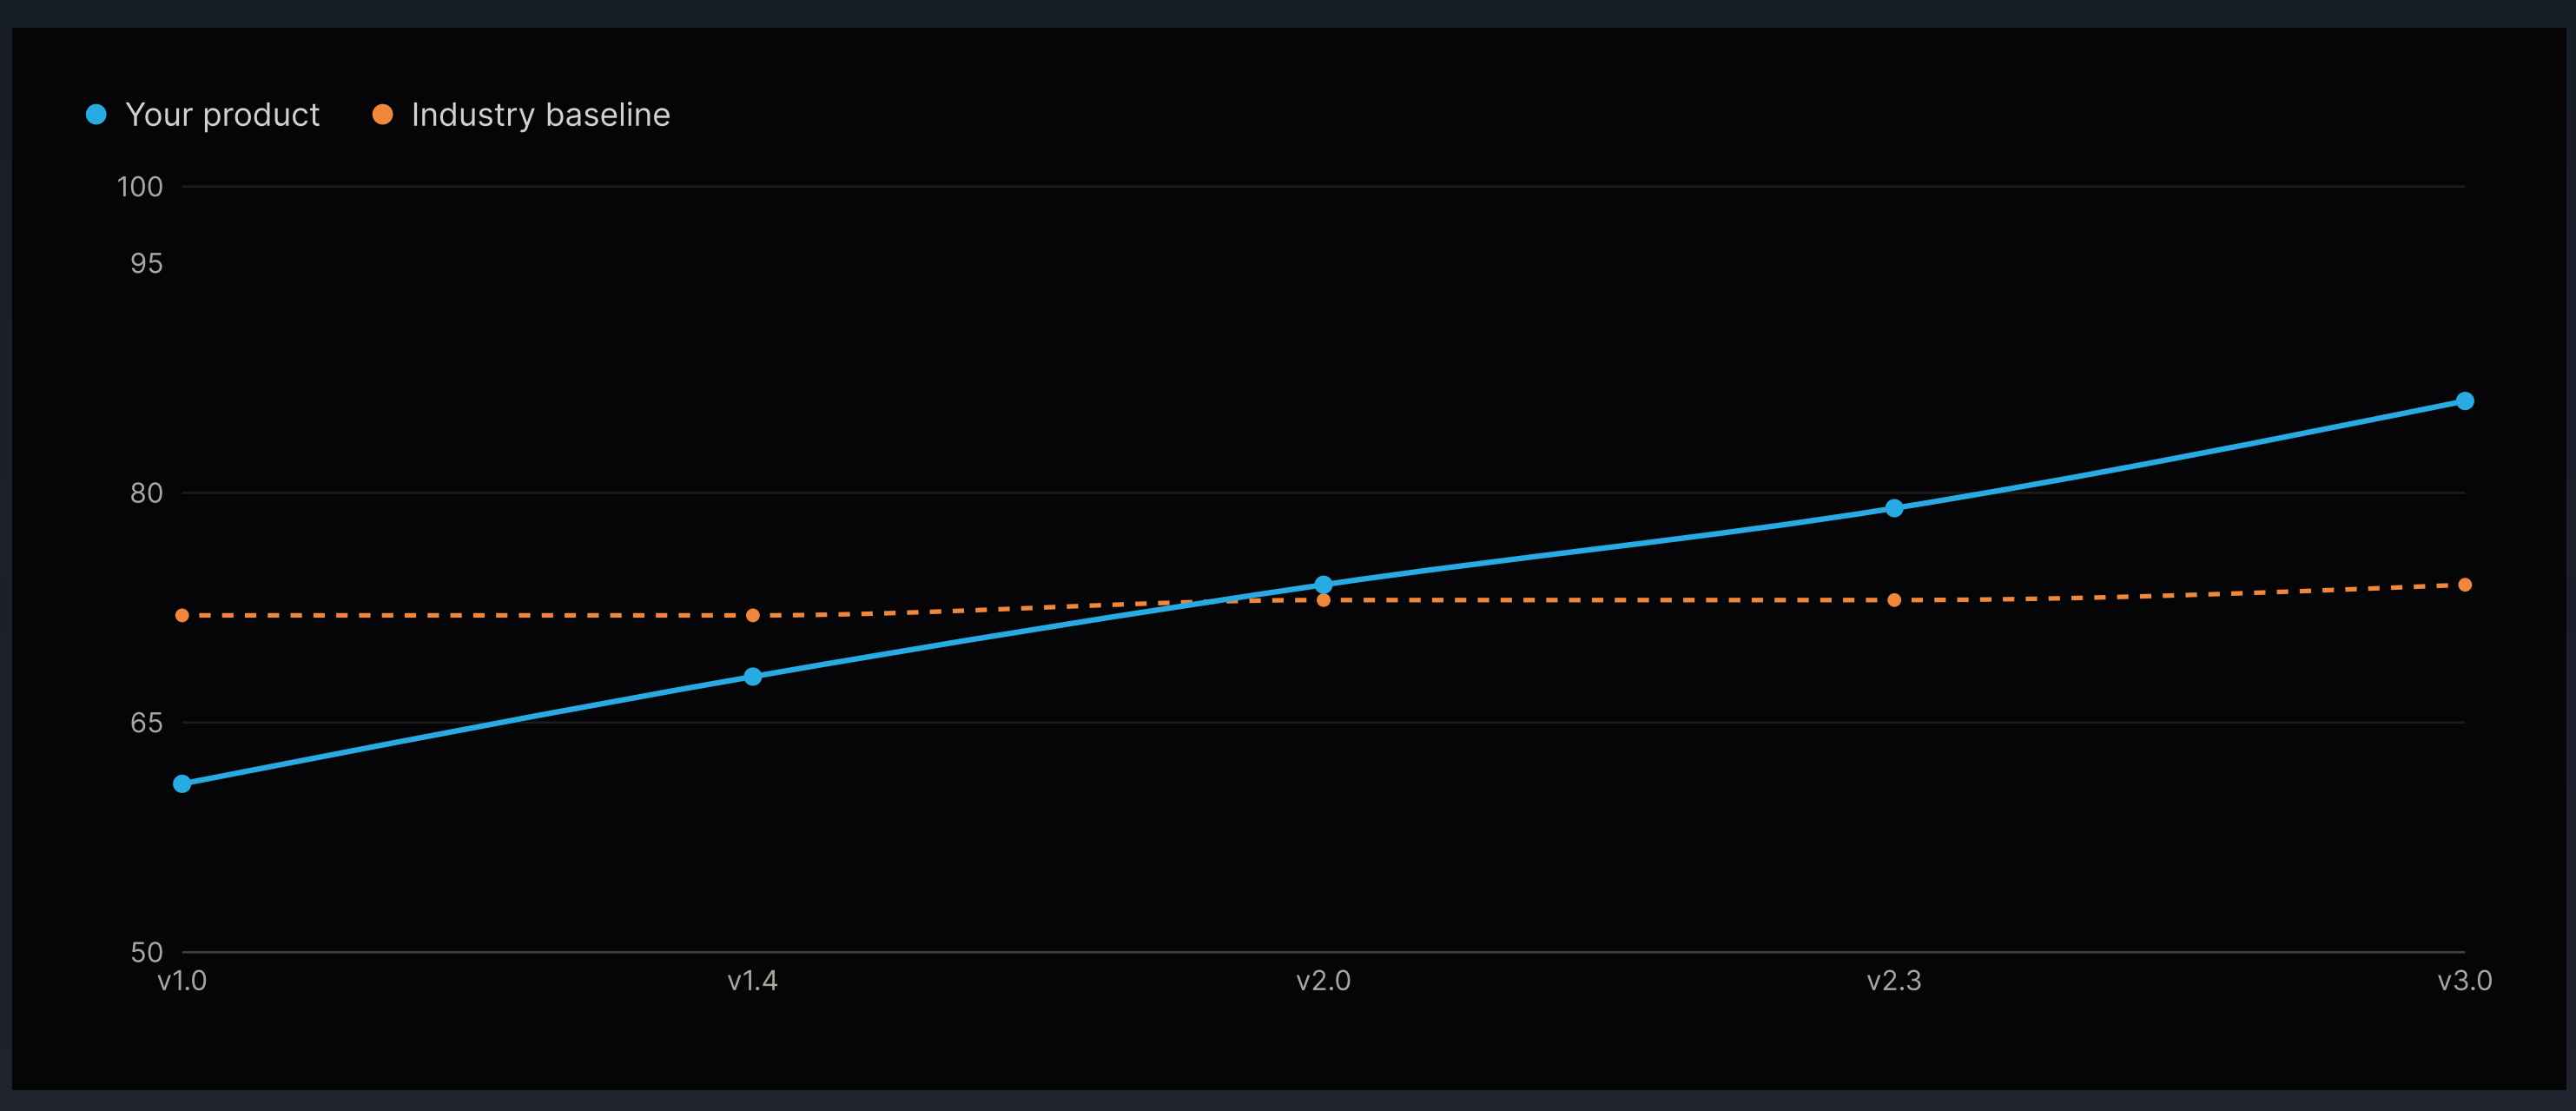
Time on task
How long the task takes against the standard.

Error rate
How often people slip, backtrack, or hit a dead end.

Satisfaction
A standardised score (SUS / CSAT) for how it felt.

The UX Index, release over release

One score, tracked at every major release, plotted against the standard you chose. A redesign should move this line up — benchmarking is how you prove it did.



Proof your experience is improving — not just changing

Most projects need both. One counts what is happening across a crowd; the other sits with a few people and asks why.

01
Consistent metrics

02
A clear standard

03
Task-based, not opinion

The same measures, captured the same way each time — that’s what makes scores comparable.

Benchmarked in the wild

A few frames off the sheet — products we measured, tracked, and moved.

Frequently asked questions

What’s a UX Index, exactly? +

What do you benchmark against? +

How is this different from usability testing? +

How often should we run this? +

Want a number that tracks whether *your UX is actually improving?*

Tell us what you want to measure and what to measure it against. We'll set up a UX Index you can track release over release.
