Usability testing

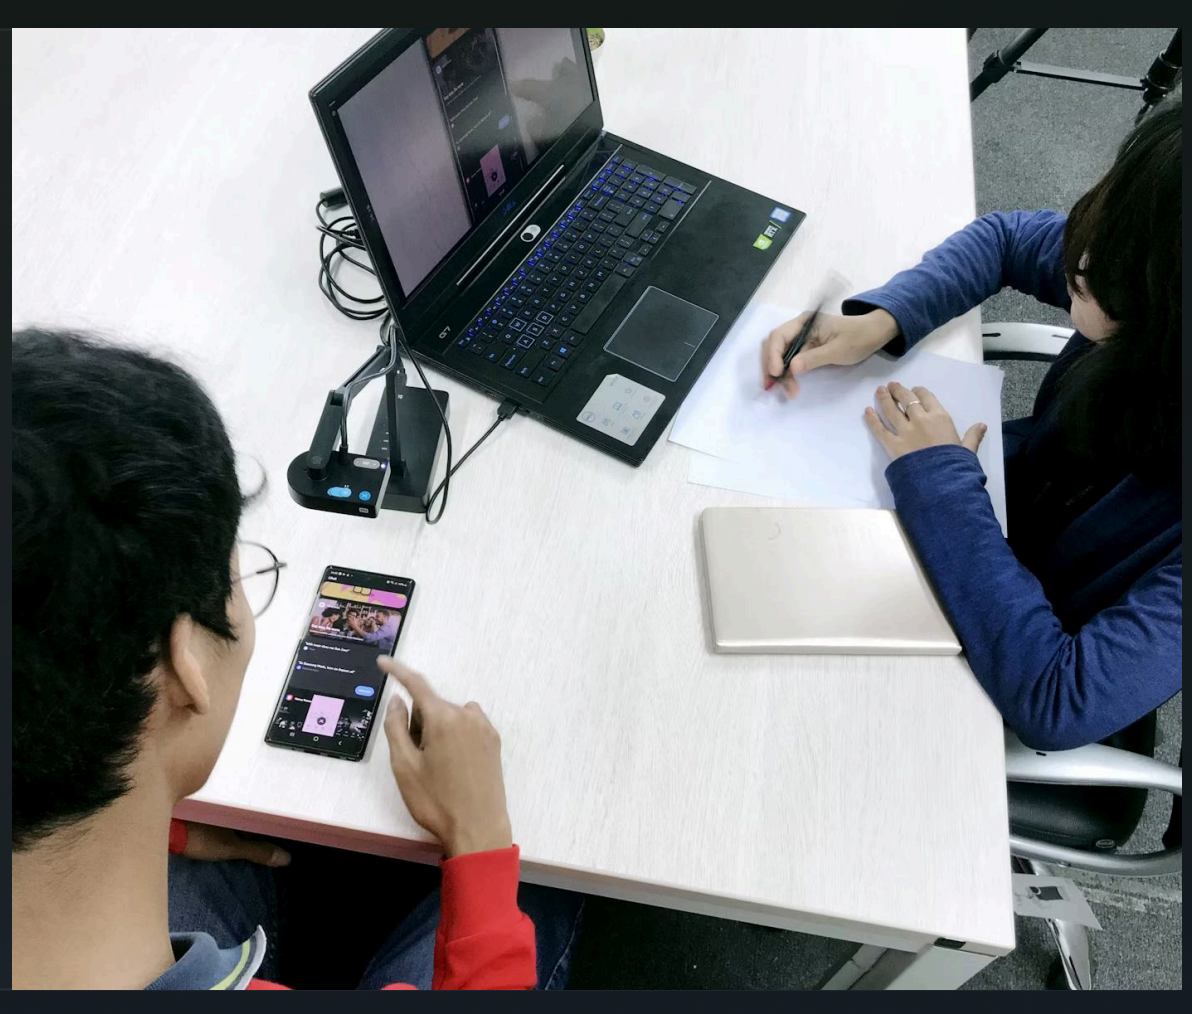
We put your product in front of real users and watch what happens, where they hesitate, where they drop off, and what quietly confuses them.

Watch real users attempt real tasks

Definition

“Can they actually do it?”

Usability testing evaluates how easy a product is to use by watching real users attempt real tasks on it — sign up, check out, find a setting. A researcher notes where they hesitate, where they get stuck, and where the product doesn't behave the way they expect.



What we capture

Hesitation
The pause before a click — the moment of doubt.

Drop-off
Where a task quietly gets abandoned.

Mental model
Where the product breaks the user’s expectation.

Workarounds
The unexpected paths people take to succeed anyway.

Friction you can see beats friction you assume

Most projects need both. One counts what is happening across a crowd; the other sits with a few people and asks why.

Real friction, not guesses
Watching someone struggle with a flow tells you more than any internal review ever will.

⚠ **Catch issues early**
Numbers show you where the problem is. Conversations show you why it’s happening. Together, they point to a fix.

Continuous improvement
Testing doesn’t stop at launch, it’s part of how a product keeps getting better.

✓ **Confidence before you ship**
Know a flow works before it goes in front of your full user base.

Six principles behind every session

The method changes — a formal lab session, a remote unmoderated test, or a five-minute guerrilla test in a coffee shop. The way we run them doesn't.

01
Real users, real tasks

No proxies, no imagined personas — the people who use your product, doing what they came to do.

02
Observed behaviour over opinion

03
Method matched to the question

Tested in the wild

A few frames off the sheet, products we put in front of real users before they shipped.

Frequently asked questions

What counts as a usability test? +

When should I run one? +

How many users do I need? +

What do I get at the end? +

Not sure your product actually works *the way you think it does?*

Give us a flow and a few real users, and we'll show you exactly where it holds up and where it doesn't, with a ranked list of fixes, not a pile of recordings.
